   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       vectors may be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER polypeptides. The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for diagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoporosis, fractures and other disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This shows a vervet transforming growth factor-beta (TGF-beta) binding protein designated VBEER. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with inappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 4; Page 122-123; 162pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              osteoporosis and fractures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids (I) encoding a transforming growth factor beta binding protein, useful for identifying agents for treating osteopenia,

The coding sequence was isolated from a human kidnay cDNA library containing exons 1 and 4 of the sequence. HDCR6 is closely related to the DAN and DCR5 proteins, both of which act as antagonists morphogenic proteins such as BMP. It is possible that the hDCR6 gene an protein can be used as immunogens, modulators of cell function, growth and differentiation, to reduce undesirable bone formation, to identify DCR6 binding agents, in diagnosis, and in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 8; Fig 3;

The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for diagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoporosis, fractures and other disorders

inappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The CDNA or vectors may be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER polypeptides. The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for diagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoporosis, fractures and other disorders associated with low mineral content.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      rnis snows a rat transforming growth factor-beta (TGF-beta) protein designated rBEER. The cDNA and protein may be used prevention, treatment and diagnosis of diseases associated inanaromiliate names according

-!- FUNCTION: STIMULATES TRANSCRIPTION. BINDS TO PURINE-RICH DNA SEQUENCES. CAN FORM A TERNARY COMPLEX WITH THE SERUM RESPONSE FACTOR AND THE ETS AND SRF MOTIFS OF THE FOS SERUM RESPONSE ELEMENT.

-!- SUBCELLULAR LOCATION: NUCLEAR.
-!- TISSUE SPECIFICITY: PREDOMINANTLY EXPRESSED IN THE BRAIN, AND LESSER EXTENT IN THE HEART, LIVER AND MUSCLE.

-!- SIMILARITY: BELONGS TO THE ETS FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                InterPro; IPRO00418; -.

The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with reatment and diagnosis of diseases associated with reatment and diagnosis of diseases associated with reatment and classification. For example, they may be used to treat diseases by excitifying mutations or consider the control of the control of the control of the control of the control of control of the control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control control of control control of control control of control of control control of control of control control of control control of control control of control control of control control of control control of control control of control control of control control control control of control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control control contr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ρy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This shows a murine transforming growth factor-beta (TGF-beta) CC binding protein designated mBBER. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with CC inappropriate BEER expression. For example, they may be used to treat CC disorders associated with decreased TGF-beta BP expression. The cDNA or CC vectors may be administered to treat diseases by rectifying mutations or CC eletions in a patient's genome that affect the activity of BEER by CC expressing inactive proteins or to supplement the patients own production of BEER polypeptides. The nucleic acids may be used for recombinant CC production of BEER, gene therapy, antisense therapy as probes for CC diagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists CC may be used to increase bone mineral content for the treatment of CC disorders such as osteopenia, osteoporosis, fractures and other disorders content of with low mineral content.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This shows a bovine transforming growth factor-beta (TGF-beta) binding protein designated bBEER. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with finappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or vectors may be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER polypeptides. The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for diagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoporosis, fractures and other disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 7; Page 127; 162pp; English.

                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                 This shows a vervet transforming growth factor-beta (TGF-beta) binding protein designated vBEER. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with inappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or vectors may be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER polypeptides. The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for adiagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoporosis, fractures and other disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 4; Page 122-123; 162pp; English

APPLICANT: WERKULOV, Gennady et al
APPLICANT: WERKULOV, ISOLATED HUMAN PROTEASE PR
TITLE OF INVENTION: NUCLEIC ACID MOLECULES EN
TITLE OF INVENTION: USES THEREOF
FILE REFERENCE: CL001177
CURRENT APPLICATION NUMBER: US/09/813,819
CURRENT FILING DATE: 2001-03-22
NUMBER OF SEQ ID NOS: 4
SOPTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 2
LENGTH: 855
                                                                                                                                                                                                                                                                                                                               В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 1
